As the global leader in big data analytics, no other company delivers more value from data than Teradata. Now, through our focus on data philanthropy, we’re helping charitable organizations around the world change the way they do business. Because when we all lend a hand to solve tomorrow’s challenges... humanity wins.

ALIGNING OUR STRENGTHS WITH WORLD NEEDS.

Teradata Cares is leading the strategic giving focus for our company. With a corporate emphasis on data analytics – through platforms, applications and services – our data philanthropy strategy aligns our corporate strength of big data analytics with the demands of charitable organizations - using data to understand and help the world’s citizens for public good.

To strengthen our commitment to data philanthropy, Teradata has partnered with non-profit organizations like DataKind to match volunteer data scientists with social agencies, civil groups, and non-governmental organizations offering consulting services to explore the power of using data to better serve their world and ours.

BIG DATA ANALYTICS MEETS BIG WORLD HUMANITY THROUGH THE POWER OF PEOPLE.

Volunteering unleashes the power of the human spirit. Now, you can help. Charitable organizations often lack the resources or human capital needed to uncover and analyze volumes of data that could help transform their business. As an employee, customer or partner, there’s no better way to help than by offering your data skills for the non-profit organization of your choice. You could also reach out to a number of data organizations and offer your help: DataKind, Bayes Impact, Data Science for Social Good or Code for America.

Doing Good With Data™
